## Please join us for our first ever virtual Region 8 – wide G-318 workshop!

This workshop will provide guidance on developing or updating your local hazard mitigation plan to meet the requirements of Title 44 Code of Federal Regulations (CFR) §201.6 and §201.7 for FEMA approval and eligibility to apply for FEMA Hazard Mitigation Assistance grant programs. This workshop covers the local hazard mitigation plan requirements, such as the planning process, risk assessment, and mitigation strategy and will have a strong focus on developing solid mitigation project ideas.

**This training is open to any and all involved in the development of their local hazard mitigation plan,** including local government officials, emergency managers, land use planners, engineers, and floodplain administrators, those involved in the development of other local plans or those who just want to learn more about hazard mitigation planning.

The content is broken up into four modules that cover the stages of mitigation planning. Each module will have two session options, one in the morning and one in the afternoon, and participants may attend the session that works best for them. **All participants are strongly encouraged to attend one session from each of the four modules to complete the full course.**
